

LAVA
PURE

LAVA PURE

On the cutting edge. Nowadays detoxification forms a natural part of a healthy life. Your daily requirements increase and you want to maintain an active lifestyle. Then it is particularly important to minimise internal stresses. The polluted environment permanently brings harmful substances into our organism, which have a decisive influence on our vitality in the form of storage toxins.

Take a breather by means of internal cleansing

For internal cleansing, the body primarily needs effective binders, i.e. substances that have a great attraction for toxins and can reliably remove them. The zeolite-clinoptilolite volcanic rock is uniquely suited for binding a large number of the pollutants that are widespread today:

- Heavy metals such as lead or cadmium from contaminated soils or from the air
- Mercury, for example from amalgam fillings
- Radioactive substances which accumulate in sea fish, among other things
- Ammonium which is produced in the digestive system by an excess of meat consumption
- Pesticides such as glyphosate from conventional agriculture and many other pollutants

Volcanic rock travels through the gastrointestinal tract like a rubbish chute, binds these harmful substances firmly to itself and eliminates them reliably in the stools within 24 hours. The entire digestive tract, liver, pancreas, kidneys and blood are unburdened.

Like a healthy pond, a person also needs a balance between an influx of nutrients and a purifying outflow to maintain a balanced bodily environment.

Studies in the field of endurance sports confirm an 11% increase in performance by taking LAVA PURE.

Reducing the need for vital substances

With LAVA PURE, the organism is already protected from continuous new stress in the digestive system. In this way, a large proportion of the absorbed toxins do not even get into the bloodstream and body tissue. In order to protect the body cells from these pollutants, the organism subsequently really needs a range of vital substances and cell protection agents. In this way, the need for antioxidants can be reduced by up to 50% (!).

Compensate for acidosis

Sweet cakes, a grilled steak or Italian pizza & pasta... the everyday treats which most people have grown used to cause an excess of acidity, which can lead to well-known undesirable side effects. LAVA PURE has been proven to provide the organism with over 30 different minerals and valuable electrons. If taken continuously, these help to regain a neutral body environment. The result: more drive, firmer connective tissue and a more vital appearance.

Topping up magnesium and calcium

Some minerals are needed in larger quantities by the organism. LAVA PURE therefore contains an additional 10% dolomite, which provides magnesium and calcium.

However, the multitude of other minerals also provides valuable support for the metabolism.

LAVA
PURE

A pilot study on over 10,000 people shows a significant reduction in pathologically elevated liver values after only 3 months of LAVA PURE.

Stay young with silicon

The volcanic rock in LAVA PURE is an aluminosilicate and contains silicon. This mineral is particularly important in the regeneration of connective tissue. It is absorbed by the body as silicon dioxide and slows down aging processes such as wrinkling. It helps to produce strong nails and hair as well as firm tissue. The silicon content in the blood decreases continuously from a young adult and should be supplied throughout life, especially for the 50-plus generation.

The silicon in LAVA PURE strengthens the connective tissue and helps to maintain the body's youthfulness.

Important: Purity of the material

Since volcanic rock has such an immense binding power for heavy metals and toxins, it is particularly important to set the highest standards in the mining and processing of the material: if the rock is already preloaded with impurities, it can no longer have a cleansing effect in the body. For LAVAVITAE, only the purest parts of particularly suitable mines are used to obtain the raw material. Samples are screened before and after mining. In addition, all equipment and assembly lines are exclusively cleaned from lubricating greases and oils commonly used in mining prior to production. Only the best material is further processed in a special preparatory process.

Special processing generates high efficiency

The special rock preparation of LAVA PURE by means of specially developed and patented cyclone technology guarantees optimal effect with maximum safety. This unique system leads to a targeted reduction of the rock particles to a grain size in the micrometer range (3.8 to 7.2). This results in an enormous increase in the effective particle surface area to up to 1,000 m² (!) per gram of rock powder. This means that even small amounts can have a great effect on the body. In addition, only this form of processing results in the the rock powder becoming pre-charged, which initiates the physical exchange processes in the body.

Science and research prove the effect

The patented preparation produces the specific properties in LAVA PURE that underlie the clinical and pre-clinical studies for this product. We have summarised the results of 20 years of research in a glossy brochure for medical professionals and therapists (which can be requested via the LAVAVITAE support). There you can read in detail about the positive effects on the intestines, nonspecific unburdening of the liver and increasing athletic performance.

Top quality for a unique medical product

Volcanic rock for internal consumption may only be marketed in Europe as a medical product. This requires a comprehensive certification process that guarantees customers appropriate safety and effectiveness during use. However, LAVA PURE not only meets the legal requirements for medical products, it far exceeds them. In addition, this premium product is underpinned by a permanent scientific and clinical research process for its continuous further development.

The special LAVAVITAE product refinement process

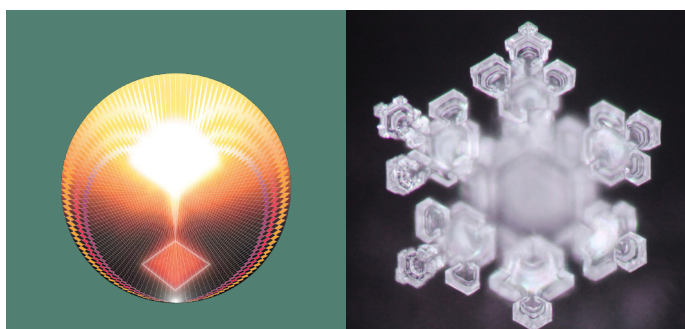

Despite careful and gentle processing, the original vibration of the selected raw materials also inevitably changes during the production of natural products. LAVAVITAE therefore activates all products with a special natural resonance method, restoring their original vibrational force. As a result, the ingredients are more bioavailable and the organism also benefits from an extraordinarily subtle effect.

Dr Masaru Emoto is the world's most renowned water researcher. LAVAVITAE has commissioned his Hado Life Europe Institute to examine all products with his special method of water crystal photography. The result indeed shows beautifully shaped and regular crystal images.

Recommended dose

Take one level portion spoon with powder (1 spoon = approx. 3 g for loose powder and approx. 5 g for compacted powder) mixed in a glass of water (at least 100 ml) or 3 capsules with a glass of water 2-3 times a day. The duration of intake should be at least 12 weeks or as long as the recurrent physical stresses exists.

Note: Turn or shake the can of LAVA PURE after each use so that the powder remains loose and does not compact. In this way, you ensure optimal intake of LAVA PURE in powder form.

The refining process of LAVAVITAE restores the raw materials in the products to their original vibrational power. Dr Masaru Emoto is the world's most renowned water researcher. LAVAVITAE has commissioned his Hado Life Europe Institute to examine all products with his special method of water crystal photography.

How does the professional do it?

The renowned health scientist and zeolite expert Prof. Dr. Karl Hecht recommends taking the volcanic mineral zeolite in powdered form for optimal effect. Mix one or two spoons of LAVA PURE in a glass of warm water with a ceramic or plastic spoon. Then take small sips of this suspension, rinse gently and then swallow. Repeat this until the glass is empty. This is the best way to maximise the effect of cation exchange. In addition, 2 to 3 litres of water should be drunk during the day.

LAVA PURE should be taken at intervals of half an hour before the consumption of other drinks or food.

Ingredients per 100 g

Activated Zeolite	90 g
Dolomite	10 g
thereof calcium	2,24 g
magnesium	1,28 g

LAVA PURE by LAVAVITAE is available in three different forms:

- in capsule form / 200 capsules / 100 g net quantity / 3 x 3 capsules daily dose

100 g
Net filling quantity
- in powder form / 200 g Net filling quantity / 6 - 9 g daily dose
200 g
powder
- in powder form / 400 g Net filling quantity / 6 - 9 g daily dose
400 g
powder
